What is one simple thing you can do today to harness more power of Junxure tomorrow?

Answer: Fill out the "action classifier" fields consistently and accurately: Action Type, Process, & Action Keyword.

Why? Today's completed action is tomorrow's living history for each client. As your relationship grows, so will the history, and browsing for those past details won't be as easy. Junxure is built to assist you! By noting the key "action classifiers" each time you add a new action, you make it possible for Junxure to immediately search, report on or drill down into this critical history for you whenever necessary.

Action Classifiers

Action Type

Type is the broadest way for you to identify the kind of action. What happened to initiate the action? Was it a phone call, a letter sent, an email received, a meeting held, a note recorded, etc.?

Process

Process is a way for you to identify what an action is about by using a topic or category. Think about the different services you provide, or areas of your business. Examples include: estate planning, insurance, financial planning, portfolio analysis, trading, seminars, administrative, education, paperwork, meeting prep, etc.

The screenshot shows the 'View Edit Client Actions' window in Junxure. The client information for George Andrews is displayed on the left, including his address (25 Andrews Drive, Oaks, CA 94555), email (home@nat.net), and SSN (222222222). A red banner indicates 'Client On Vacation 5/1/2009 - 5/31/2009'. The right side of the window shows the action details for a 'Phone' call on 05/06/2009, performed by Julie Cochrane, categorized under 'Estate Planning'. The bottom of the window features a table for adding new actions with columns for Note, Minutes, and Cost.

Note	Minutes	Cost
	10	\$ 0
Action Description	5	\$ 0
Follow Up Action Note	5	\$ 0

OVERVIEW: WHAT HAPPENED???

What occurred that caused you to open up this action?

EXAMPLE: Sally called and wants to change the beneficiaries on her IRA account. She wants George primary and secondary split 50/50 between two kids. Also wants to remove her sister.

WHAT NEEDS TO BE DONE???

If nothing needs to be done in this action, this box may be blank.

EXAMPLE: Send Sally change of bene form for her IRA account #567898

WHAT WAS DONE???

You should include enough detail so that 2 years from now, if you open up this action, you can determine what was done.

EXAMPLE: Mailed Sally's paperwork to ADR and will wait to receive back to initiate any changes.

Action Keywords

Action Keywords allow you to enter additional details regarding the action, beyond a general category or topic. With type and process you can only choose one per action. With action keywords you can choose as many as you'd like to classify and note details as they pertain to an action.

How to Determine your List of Classifiers

Type, Process, and Action Keywords give you the ability to sort and filter through all actions pertaining to a specific topic or detail in order to quickly pull together actions instead of having to scroll through a long list of historical actions. This search functionality is available both in an individual contact record and also globally across the database using the Actions Rules Builder.

To help your firm determine what you should include in these customizable drop down lists, and to make actions easier to find in the future, use these following questions to help guide you through the decision making process.

1. "What information do I want to know from Junxure?"
2. "What information do I need to look up in a quick pinch when a client calls in looking for information about a task we've done for them?" (trades, address changes, beneficiary changes, account applications, letters, etc.)
3. "What events, revolving around my clients, do I want to make sure will not fall through the cracks, and what events do I need to be proactive about in order to avoid future issues? (Prepare cost basis reports for certain clients and mail them early enough to avoid last minute calls.)
4. "In what way do I want to view or use this information?" (Run a report, review notes before meetings, etc.)

Once you sit down, ask yourself these questions, brainstorm with your staff, and write down everything, you will then be able to have a clearer idea of how to develop your list of action types, processes, & action keywords and determine what actions fall under each classifier. You might want to do some tests to verify that the classifiers (action type, process, action keywords) give you what you need.

If you need further assistance, then you may consider our Practice Management Consulting services which provide you with Junxure's PowerTools, which are pre-built areas of the program. For more information see: <http://www.junxure.com/main/consulting/index.asp>

Tools to Harness the Power

What if everybody doesn't remember to fill in these areas of the action detail window before closing out of an action?

Junxure provides features to make this an unfailing process.

Highlighted below are two tools that will assist you in making sure that action classifiers are filled out consistently, and properly.

Action Templates

First, use Action Templates to help ensure these fields are filled out consistently and properly for different types of actions your office may create on a regular basis.

Action templates allow you to create a (standardized) template for different actions which automatically fills out information within the action detail window when the action is initiated. This could include information such as Note, Action Description, the Assigned To field, as well as Type, Process, and Action Keywords. Here is a sample Action Template that could be used when creating an action for a call made to someone who was referred to your office.

Edit Action Templates

Select An Action Template: Initial Ref Call

Employee: [Dropdown] SSN: [Text] bSSN: [Text] Date: 5/ 8/2009 [Dropdown] Exclude From History Report

Client: bClient SSN: bSSN Type: Phone [Dropdown] Planning Process: [Dropdown]

Address: bAddress Advisor 1: bAdv1 Process: Misc Contact

City: bCity Advisor 2: bAdv2 Append Timestamp: Category: Contact Record Owner: <Everyone> [Dropdown]

Home Phone: bPhoneHome CSR: bCSR

Primary Phone: bPhonePrimay

Business Phone: bPhoneBusiness

Note: Minutes: 0.0 \$ 0.0

Action Description: Minutes: 0.0 \$ 0.0

Follow Up Action Note: Minutes: 0.0 \$ 0.0

Initial call to a new referral

Talk to them about who referred them
Ask what they might be interested in
Ask if we can send info about firm
Ask if they want to make an appt

Add additional action keywords as appropriate based on phone call

Billing Information

Hourly Rate: \$ 0.00

Flat Fee: \$ 0.00

Total: \$ 0.00

Having this information pre-filled certainly doesn't prevent anyone from adding additional information into the action detail window. However you will know that at a minimum this information will be recorded and not forgotten, along with the Action Type, Process, and Action Keyword being entered.

- [Action Templates Online Documentation](#)

Force or Prompt Users to Complete Fields

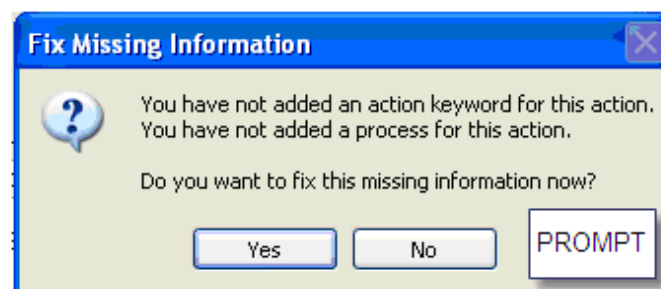

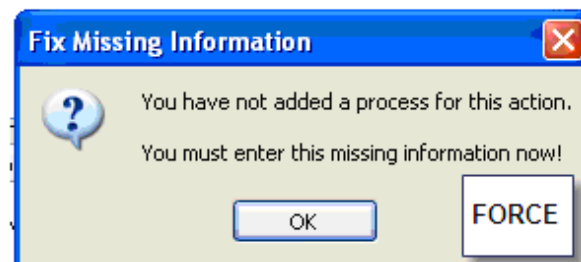

Second, there is global setting available that will either "force" or "prompt" users to enter in a Process or Action Keyword before closing out of an action.

As mentioned, entering Action Type, Process, and Action Keywords into an action can be very valuable, but even adopting this as a "best practice", people can sometimes forget to classify actions using these fields. To help ensure all employees are entering this valuable information, Junxure does provide a setting enabling firms to either prompt, or force, staff members to complete these fields before exiting an action. This feature can also be used as a temporary reminder measure to help staff get used to filling out the action classifier fields.

To turn these features on or off, go to **Main Menu->System Options**. You will find the "Force or Prompt User" feature listed under the category of "Actions" as shown below.

When someone is either forced or prompted to complete the noted fields, they will receive one of the following pop-up boxes.

Searching for Actions

Now that we have learned about some tools to help make sure that action classifiers are consistently filled, let's review one of the ways that you can quickly find actions by using the Actions Sub Tabs by "Process", "Action Type" and "Action Keyword" as shown circled in blue below.

Let's say for example, that you would like to print out a list of meeting notes. If you reserve the action type of "meeting" to use anytime you record meeting notes, then you can quickly search for all meeting notes by selecting the Actions Sub tab of "Type", then select the type of "Meeting".

You will now see all actions with an action type of "meeting" in the grid to the right, making it much easier than scrolling through a long historical list of actions on the Actions sub tab.

The screenshot shows a contact profile for George and Sally Andrews. The 'Actions' tab is active, and the 'Type' sub-tab is selected. A grid of actions is displayed, with the 'Meeting' type selected. A red arrow points to the 'Meeting' type in the left-hand menu.

Type	Client	Date Entered	Date Due	Assigned To	Note
Meeting	Andrews George	05/01/2009	05/01/2009	Cambern H	quarterly meeting
Meeting	Andrews George	02/16/2009			met with client and reviewed asset allocations. Mentioned new investment options that may be a better fit for them.
Meeting	Andrews George	02/04/2009	11/01/2008	Cambern H	MEETING NOTES EXAMPLE George I met for his quarterly review meeting and we discussed rolling over his 401k plan.
Meeting	Andrews George	06/27/2008			Copy of Note Meeting 3/20/2008 <<Meeting 4/20/2007 9:43:12 AM
Meeting	Andrews George	12/17/2007	12/17/2007	Kincheloe E	Met with George and Sally. Reviewed Portfolio. They are pleased with performance. We discussed adjusting allocation. Rebalance large cap growth out recommended allocation to Mid Cap. Sally will be receiving bonus and met with client and presented plan options. began discussion of available alternatives and clarify objectives
Meeting	Andrews George	12/31/2000	02/04/2001	Smith J	

Next select the "Print" icon, then select the "Print Grid" print option, then select the print button as highlighted in yellow below. This will print out all of your meeting notes for the selected contact as shown in the report below. If you would like to see the meeting notes within a specific date range, then select the "All Actions Between" and record your date range as highlighted in green below.

The screenshot shows the 'Print Client Actions' dialog box. The 'By Grid' option is selected, and the 'All Actions Between' date range is set to 05/05/2009 to 05/12/2009. The 'Print' button is highlighted in yellow.

The screenshot shows the 'Client Action Report' document. The report is titled 'Client Action Report' and is prepared for George and Sally Andrews as of Tuesday, May 12, 2009. The report shows a grid of actions, including a meeting on 12/31/2000.

Date Entered	Type	Action Required	Completed	Entered By	Assigned To	Completed By
12/31/2000	Meeting	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	Smith, John	Smith, John	

Note: met with client and presented plan options; began discussion of available alternatives and confirm/clarify objectives

2	Date Entered	12/17/2007	Type	Meeting	Entered By	Jones, Trevor
